ABOUT US

Detectnology (UK) Ltd specialises in the sale, hire, and maintenance of the world's most advanced weapon, threat, and narcotic detection equipment. We have a long-standing working relationship with the correctional and judicial public sectors in the UK, and our advisory and supply services are totally unbiased and transparent.

We are independent of any manufacturer, and our recommendations are always based on what is best for the individual application. We strive to provide value for money and to meet the environmental expectations and performance capabilities of our customers.

No matter what the application or the environmental demands, Detectnology (UK) Ltd will ensure that your needs are met with the most technologically advanced screening apparatus available, coupled with the most competitive affordability and proactive level of service.

OUR CORE SECTORS

JUDICIAL FACILITIES

With a wealth of experience providing products and maintenance to the country's Judicial estates, extending to in excess of 20 years, Detectnology ensures all security screening devices remain fully.

CORRECTIONAL FACILITIES

Detectnology specialises in the Planned Preventative Maintenance programs for all correctional facilities and their associated asset management.

AIRPORTS/AVIATION

We are proudly associated with the sectors most regulated and industry approved security screening devices, operational throughout most Airports and Transport Hubs today.

EMERGENCY SERVICES

Detectnology has supplied countless screening devices and advisory services in order to assist, support and eradicate potential threats and attacks on their respective local communities.

EXHIBITIONS & EVENTS

There has been an increased onus of late over the importance of security and screening surrounding events and social gatherings, Detectnology offer the ability to purchase or hire security equipment for your venue.

SECURITY PROVIDERS

Detectnology are recognised and authorised suppliers to the private security sector, having extensive experience in supporting company communications, surveillance and detection requirements.

CARGO HUBS

Detectnology has extensively advised and supplied the nations Logistic companies with people screening equipment in order to reduce, even eradicate internal theft and potential operational losses.

HOSPITALS & MENTAL HEALTH

INTERNATIONAL PORTS

FIELD SERVICE ENGINEERS

Detectnology has a nationwide team of service engineers who can quickly diagnose and repair all types of faulty security equipment. We also have a 24/7/365 manned telephone support service.

We understand the risks associated with faulty equipment because we work in several high-risk and high-security environments. We are the security equipment service providers to HM Prison & Probation Service and HM Courts & Tribunal Service, as well as various independent contracts

with UK Police, Ports Authorities, NHS, and various commercial organisations.

All our products come with a minimum of 2-year warranty, which is longer than the industry standard of 12 months. This gives our customers peace of mind knowing that their equipment is built to the highest quality and is less likely to malfunction during the warranty period.

Our experienced service schedulers plan all preventive maintenance (PPM) visits well in advance of the due dates. This gives our customers plenty of notice and flexibility. Once all servicing provisions have been completed, they are certified immediately. This allows customers

to retain documentary evidence of each attendance as well as the operational status of each asset.

All Detectnology UK Ltd field engineer support personnel are CTC certified, hence Counter Terror Cleared, which provides the highest level of security clearance available throughout the UK governing bodies.

The company prides itself on our outstanding customer service reputation and continually works hard to uphold this standing with our customers. We firmly believe that excellence in customer service is the foundation of our business.

CORPORATE SOCIAL RESPONSIBILITY

Detectnology (UK) Ltd is committed to social corporate responsibility.

Here are some of the ways we are reducing our environmental impact:

- We have a nationwide team of service engineers, which allows us to minimise driving mileage by allocating work to the nearest engineer. We always try to resolve initial issues over the phone to avoid unnecessary site visits.
- Our engineer's vans are less than 3 years old and are fully maintained to ensure optimal performance. We are also planning to move the engineers into electric vehicles in the future.
- We recycle all our waste packaging and electronic components.
- We can remove and certify the correct disposal of your old security equipment.
- We believe in the Three Rs: Reduce, Reuse, and Recycle. We are always looking for ways to reduce our environmental impact, and we are committed to being a responsible corporate citizen.
- Where practically possible we look to partner only with suppliers that take sustainability and corporate social responsibility as seriously as Detectnology does. Before we enter into any agreements this is always on the list of considerations to be discussed by the management team.
- Detectnology is committed to a sustainable future. We are dedicated to environmental improvements within our organisation, that foster a sustainable future and lead to social and economic improvements in the community we do business.
- Detectnology promotes diversity from the inside out by establishing an inclusive hiring practice and encouraging our teams to embrace different cultures, backgrounds, and identities.
- Detectnology is currently going through the ISO 14001 accreditation process.

GARRETT

Garrett's walkthrough metal detectors are highly effective at moving large volumes of patrons through checkpoints with superior detection performance. They are trusted worldwide to safeguard airports, government buildings, correctional facilities, and international sporting contests.

GARRETT MULTI-ZONE

The Multi-zone provides enhanced performance and with over 15 preconfigured selectable programs engineered to meet the varying security requirements of schools, stadiums, government buildings, mass transit, nightclubs, prisons, airports, entertainment venues, loss prevention, and special events, etc, its an absolute doddle to use.

This budget-friendly detector includes an easy to use LED display control panel and HiVis zone light arrays (Green and Red to indicate pass or item detected), that are clearly visible in even the brightest sunlight.

The Multi Zone's industry leading performance is enhanced by an Auto Setup function, 20 detection zones, and tamper proof circuitry. Operator adjustments are simple, thanks to the units intuitive menu design and simple slider bar feature.

- 15 Application programs to suit a variety of needs
- Intuitive Menu Design
- Unique slider bar to quickly adjust settings
- 20 Zone precision
- Directional counter with four settings
- IoT Control Module (optional)
- Battery Backup Included
- Advanced Synchronisation
- Selectable Languages
- Bright LED Indicators, visible in direct sunlight
- Auto-Scan Function
- Superior Versatility
- Tamper-proof
- Easy assembly
- Digital Signal Processor (DSP)

GARRETT PARAGON

Best in class security. It's a revolutionary product that offers a blend of powerful performance, unparalleled flexibility, and ease-of-use. And all of this comes in a sleek, sophisticated package.

When it comes to security metal detection, no other technology offers the level of granular awareness found in the Garrett Paragon walkthrough metal detector. With 66 zones, the sensors detect from top-to-bottom and left/middle/right with unmatched accuracy.

With exclusive bilateral detection the Paragon provides evenly distributed detection, simplifies multi-unit setup, and achieves superior target analysis to single-sided detection. Optional settings allow mobile phone to be ignored while still catching mass casualty weapons.

- Ambiscan – two distinct sensitivities within one detector
- Bilateral Detection
- 66 Zones
- Integrated UPS
- High-Visibility pacing lights
- Cabinet Storage
- IP65
- Sophisticated Design
- Zero Touch with NFC reader to allow setting adjustments
- TOF (Time of Flight) sensors to detect direction of movement
- Secure Crosspieces
- Quick-Q allows mobile phones to be ignored while catching mass casualty weapons
- 200 Sensitivity Levels

HIRE OPTIONS

These items are available for both long and short term hire!

GARRETT PD65000i

With Garrett's exclusive digital signal processor (DSP), the PD6500i provides superior target detection coverage on the left, centre and right side of the body from head to toe. Unique 33-zone pinpoint detection assures the ultimate in safety, throughput and reliability with preset programs to encompass a complete range of security applications.

- Optimum Performance
- Quick Startup & program change
- 33 Zones
- Dual Detection
- Directional Counter
- Networking Ability
- Multi-brand Compatibility
- Superior Versatility
- Tamper-proof
- Easy Assembly
- Digital Signal Processor (DSP)
- IoT Control Module (optional)
- Advanced Broadband Detection Technology
- More accurate Pinpointing
- Dual-sided Detection
- Pacing Lights for traffic control with intuitive images
- Internal USB Port for updating software
- Random Alarm Feature
- Volume adjustable Alarm & Bright LED Visual
- Meets international airport and Security standards such as TSA, ECAC, DfT

STABILIZER BASE -

2 included, for use with Garrett PD 6500i or Multi Zone

PD 6500I DESKTOP REMOTE CONSOLE WITH ZONE INDICATION

For remote operation of the detector

MULTI ZONE DESKTOP REMOTE CONSOLE WITH ZONE INDICATION

For remote operation of the detector

RELAY MODULE

Provides an isolated relay contact to control lights, doors, equipment. Internal dip switches provide 4 operating modes, for use with Garrett Paragon, PD 6500i, or Multi Zone.

BATTERY MODULES

optional battery modules. While recharging, a monitoring circuit allows the batteries to charge in minimal time and then switches to trickle charge to ensure maximum charge without battery damage. The charge status is indicated on the LCD of the garrett walk-through detector's control panel and an alarm warns the operator when batteries are low

WALK-THROUGH CASTER SETS

- To allow for ease of movement. Includes two (2) rigid locking casters and two (2) swivel locking casters.

QUICK-Q SOFTWARE PACKAGE

The technology does not require the divestment of mobile phones or other small metallic items. For use with PD6500i, comes as standard with Paragon.

RAPID DETECT

One of the most versatile Archway Metal Detectors on the market, it can be transported and deployed to any location and can be set up by one person in less than five minutes, the unit can be dismantled and stacked to a manageable size and moved around with its inbuilt wheels and handle making this product ideal to move from one site to another, it has three Zone detection with LED lights on the entrance and exit and a forty hour inbuilt battery in case mains power is not available making this unit extremely easy to use and set up

- Multiple Detection Zones with 300 sensitivity levels for each zone
- LED detection lights and audible alarm when metal is detected
- LED Bar graph for displaying amount of metal detected
- Password Protected settings (no unauthorised access)
- Five minute assembly time

GARRETT SUPER SCANNER

The Garratt Super Scanner is made with advanced technology that makes it easy for anyone to use. It provides outstanding performance, stability and extreme sensitivity in detecting even the smallest metallic objects.

- Ultimate Sensitivity – exceeds NIJ 0602.02 Standard
- Large 8" scan Surface
- Sharp audible alarm and bright red LED
- Secure Internal Sensitivity Adjustment
- All metal Detection
- Self-calibrating
- Momentary push button
- Selcetable Vibrating alarm
- Rugged, High-impact ABS Case

GARRETT SUPER WAND

The Garratt SuperWand provides optimum sensitivity and fits comfortably in virtually any hand. The 360 degree detection field provides uniform sensitivity and tip pinpointing to detect with extreme accuracy.

- 360 Degree Detection Field with pinpointing tip
- Optimum Sensitivity
- Dual Alarm Mode
- One-touch button operation
- Ergonomically designed grip
- Self-calibrating
- Elongated 8.55" scan surface
- Optimum Sensitivity
- Rugged, High-impact Construction

GARRETT THD

The Garratt THD (Tactical Handheld Detector) provides accurate detection of all ferrous, nonferrous and stainless stell weapons, contraband and other metallic objects. It is the most rugged and compact detector on the market

- Ultra Sensitive Response
- Compact and rugged
- 360 Detection Field
- Water Resistant Construction
- Easy On/Off Battery Cover
- Bright LED Flashlight
- Rugged, High-impact Case
- Ballistic weave holster included

BRUKER ROADRUNNER

Bruker is recognised as the leading authority on the use of detection and identification technologies to mitigate the threat from the accidental or deliberate release of toxic gases, explosives and radioactive materials that could kill and injure civilians.

The Bruker RoadRunner is a battery-powered, hand-held, trace explosives detector that is both lightweight and portable. To maximise user convenience the system operates from rechargeable batteries and to further extend its duration in the field, these batteries are 'hot-swappable'.

The RoadRunner operates in two modes. A "sniffer" mode draws in vapours from volatile explosives and taggants and provides results in just a few seconds. To detect the presence of non-volatile explosive compounds, or to check personal property, the product integrates the same industry-standard swab-sampling system that is used in the Bruker DE-tector desktop trace explosives detector.

In addition to the dual-role explosives detection capability, RoadRunner also incorporates narcotics detection as standard. Typical applications of RoadRunner include environments such as airport security, building access control, customs facilities, and prisons/remand centres.

Why specify RoadRunner?

- Industry-standard IMS detection technology
- Time proven technology; the de-facto standard
- Detects trace explosives and trace narcotics
- Hand-held, portable trace detection
- In a go-anywhere battery-powered package
- Non-radioactive HEPI source
- Patented source reduces the compliance burden
- Patented CHIRP-IMS signal processing algorithm
- Provides sensitivity of a benchtop detector
- Automatic continuous self-calibration
- Optimises each measurement automatically
- Operates in sniff or swab modes
- Best configuration for different sample types
- Re-useable sampling swabs
- Reduce your operating costs / cost per test
- Conforms to harmonised CE standards and EC

BRUKER DE-TECTOR FLEX

The impressive DE-tector Flex is a desk top Trace Detection unit used for identifying explosives and narcotics, sample collector strips are used to swab a sample from a surface and then inserted in the DE-tector flex for analysis.

A non radio active source is used for sample ionisation utilising photoionisation lamps and the De-tector flex uses a one tube IMS therefore positive and negative product ions are identified simultaneously, the software is accessed using an integrated touchscreen and comprehensive easy to operate user and administrator command and menu functions.

An integrated thermal printer supports black and white report printouts and the replacement of consumables is a simple operator task so no preventative maintenance is required unlike other machines currently on the market.

The basic kit comes complete with a manual, power leads for UK and Europe, 120 Sample collectors which can used upto 25 times each when no substances are detected, a test marker pen and a sampling wand.

EVOLV EXPRESS

The days of invasive weapons screening are over. Screening procedures that rely on metal detectors, hand wands, and invasive bag checks are slow and manual, resulting in uncomfortable, and unsafe, crowding.

Introducing the Evolv Express®

- Evolv Express® is the world's first and only touchless security screening solution that meets all the post pandemic security screening requirements.
- Evolv Express® is proven to operate up to ten times faster than traditional metal detectors with its single or dual-lane, free-flow entrances with a fusion of new sensor technology and artificial intelligence.
- The system can spot weapons while ignoring harmless personal items all while visitors simply walk through at a natural pace.

AI differentiates personal items from threats.

- Unlike traditional metal detectors, Evolv Express® uses advanced sensor technology and artificial intelligence to screen guests while they walk through at a natural pace—without stopping and without handing over their belongings.
- Evolv Express® offers a dual-lane, free-flow system proven to operate up to ten times faster than traditional metal detectors, alerting operators to the presence of weapons while ignoring harmless personal items like cell phones, keys, and coins.

See potential threats for faster issue resolution.

- When a potential threat is detected by the system, real-time image aided alarms show guards where the potential threat is located on a person or in his or her bag. This greatly reduces the amount of physical contact required and allows guards to act quickly and efficiently.

Prioritize the guest experience.

- Families and groups can enter your venue together without long lines and without invasive checks. It's a welcoming experience that maintains dignity and accelerates entry for your guests and employees while keeping venues and facilities safe from threats.

HIRE OPTIONS

These items are available for both long and short term hire!

GILARDONI

Gilardoni is a leading manufacturer of X-ray and ultrasound equipment production and distribution for the security, medical and non-destructive testing. Gilardoni's know-how is derived from 70 years of X-ray knowledge and applying this knowledge to the security sector, understanding its peculiarities and constant changes, is able to consistently be at the cutting edge of applications and technology.

GILARDONI ARGO 536

With Garrett's exclusive digital signal processor (DSP), the PD6500i provides superior target detection coverage on the left, centre and right side of the body from head to toe. Unique 33-zone pinpoint detection assures the ultimate in safety, throughput and reliability with preset programs to encompass a complete range of security applications.

- Optimum Performance
- Quick Startup & program change
- 33 Zones
- Dual Detection
- Directional Counter
- Networking Ability
- Multi-brand Compatibility
- Superior Versatility
- Tamper-proof
- Easy Assembly
- Digital Signal Processor (DSP)
- IoT Control Module (optional)
- Advanced Broadband Detection Technology
- More accurate Pinpointing
- Dual-sided Detection
- Pacing Lights for traffic control with intuitive images
- Internal USB Port for updating software
- Random Alarm Feature
- Volume adjustable Alarm & Bright LED Visual
- Meets international airport and Security standards such as TSA, ECAC, DFT

GILARDONI ARGO 640

The Gilardoni ARGO 640 is designed to examine baggage, mails and parcels at the entrance to delimited areas, ensuring high levels of security. The system complies with the highest quality standards in the industry to guarantee fully safety in use and high reliability.

It has advanced algorithms generate a detailed image on the large monitor for a complete view of the scanned item and an incredible detection capability and can be implemented with additional accessories and software for a wide spectrum of use.

Main features include:

- Lowest weight in the market Design for prompt maintenance BEST image function
- Higher steel penetration Multiplexing ready
- Tray Return System compatible Variable conveyor speed

GILARDONI ARGO 640DV

The Gilardoni ARGO 640 is designed to examine baggage, mails and parcels at the entrance to delimited areas, ensuring high levels of security.

The system complies with the highest quality standards in the industry to guarantee fully safety in use and high reliability.

It has advanced algorithms generate a detailed image on the large monitor for a complete view of the scanned item and an incredible detection capability and can be implemented with additional accessories and software for a wide spectrum of use.

Main features include:

- Lowest weight in the market Design for prompt maintenance BEST image function
- Higher steel penetration Multiplexing ready
- Tray Return System compatible Variable conveyor speed

GILARDONI FEP ME 755

One of the larger X ray machines that Gilardoni manufacturer, the ME 1000 has a belt height of 376mm and maximum bag/parcel weight of 200kg, the 160 kv generator has a diagonal downwards beam which can penetrate up 35mm of steel and its resolution is 38 AWG guaranteed.

The ME 1000 meets the applicable international regulations for X ray equipment and has a tunnel size of 100cm x 101cm making it versatile for most industries / applications.

GILARDONI FEP ME 975

One of the larger X ray machines that Gilardoni manufacturer, the FEP 975 ME has a belt height of 376mm and maximum bag/parcel weight of 200kg, the 160 kv generator has a diagonal downwards beam which can penetrate up 35mm of steel and its resolution is 38 AWG guaranteed.

The FEP ME 975 meets the applicable international regulations for X ray equipment.

GILARDONI FEP ME1000

One of the larger X ray machines that Gilardoni manufacturer, the ME 1000 has a belt height of 376mm and maximum bag/parcel weight of 200kg, the 160 kv generator has a diagonal downwards beam which can penetrate up 35mm of steel and its resolution is 38 AWG guaranteed.

The ME 1000 meets the applicable international regulations for X ray equipment and has a tunnel size of 100cm x 101cm making it versatile for most industries / applications.

GILARDONI FEP 1000DV

One of the larger X ray machines that Gilardoni manufacturer, the ME 1000 has a belt height of 376mm and maximum bag/parcel weight of 200kg, the 160 kv generator has a diagonal downwards beam which can penetrate up 35mm of steel and its resolution is 38 AWG guaranteed.

The ME 1000 meets the applicable international regulations for X ray equipment and has a tunnel size of 100cm x 101cm making it versatile for most industries / applications.

GILARDONI FEP CARGO DV

The largest X ray machine available from Gilardoni has a tunnel size of 1500mm x 1652mm and a maximum box / pallet weight of 3000kg, it has a conveyor belt height of 314mm which is adjustable.

The diagonal upward beam which is generated from a 160kv generator can penetrate upto 32mm of steel.

The FEP ME 1000 HC is an ideal solution for Ports, Distribution warehouses, Goods in and goods out at manufacturing plants plus many more applications and has the following options : TIP, Digital Image Archiving, modular roller table

HIRE OPTIONS

These items are available for both long and short term hire!

GILARDONI SCANVAN 975

The Gilardoni SCANVAN 975 is the mobile solution for the hold baggage screening.

The vehicle, light and compact, is equipped with the Gilardoni X-ray scanner, which guarantees the best image performance of the market.

Air conditioning, power generator, operator workstation, light and windows are high quality accessories that complete the system.

The solution is the optimum product for ports, airports, customs and other sensitive areas who require the best flexibility

KUMAHIRA

The Kumahira Group has built up the history as the leading company of security industry in Japan based on prominent development ability and honed product quality more than a century since its founding in 1898.

KUMAHIRA LSR-M2

The LSR-M2 Liquid Detector from Kumahira is the latest innovative Detection system from Japan, not only is this device cost effective, compact and light weight, its screening time is almost five seconds faster than any of its competitors, this unit is easy to use and maintain and the LSR-M2 is capable of detecting explosives and flammable substances in not only glass, plastic but aluminium and steel containers proving to be the next market leader and leaving its competitors behind which is why hundreds have been sold already.

Conformity: Type A and Type B of Standard 3 required by ECAC (European Civil Aviation Conference)

Applications: Airports, Sea Ports, Train Stations, Exhibition Halls, Tourist Buildings, Museums, Embassies

Main features include:

- Automatic inspection of any type of container
- Quickest inspection time on market
- minimum installation space
- No mechanical parts.

KUMAHIRA LSR-HN1A

Inspection of hazardous objects has never been so easy and safe.

Carry around with you this portable device and detect explosive and flammable liquids anytime, anywhere within seconds, which can reduce the burden on staff inspecting suspicious objects.

Carry along with you this light and compact scanner to inspect liquid right away, on the spot, without moving the container. This will reduce the burden of staff inspecting suspicious objects.

Equipped with a sensor which can scan a wide range of containers in various shapes and materials, such as plastics and glass. Moreover, containers that have previously been difficult to inspect and containers that are inside transparent bags can also be scanned.

The scanner can detect harmful liquids in only a matter of seconds and can be operated by only a few buttons

Main features include:

- Portable liquid scanner that fits in your hand
- Screen is easy to read
- Control buttons are easy to press
- Compact and slim
- Designed and structured to achieve a small body
- Simple, minimalist design with rounded corners
- Strong and long-lasting
- Perfect for long-term use with its shock-resistant body
- Conforms to harmonised CE standards and EC.

HIRE OPTIONS

These items are available for both long and short term hire!

TRAY RETURN SYSTEMS / MOBILE ROLLER TABLES

Detectnology can have all of your Tray Return System (TRS) and Mobile Roller Table requirements custom made, quickly and at a very competitive price point.

Reasons to work with Detectnology (UK) Ltd include:

Fast turnaround times

We can handle even the largest of orders with impressive lead times. Standard dispatch is normally within 7 days and same or next day despatch is possible for those last-minute requirements.

High quality products

Our focus on quality starts with sourcing only the best raw materials, rejecting anything that falls outside our strict tolerances. During manufacture your order is checked at each stage before passing through to the next process.

Competitive prices

Because we purchase vast quantities of raw materials, often forward ordered to maintain stable prices, we can offer our products at discounted prices. This is especially possible for the very large quantity requirements you may have.

Experience and product knowledge

Whatever your industry and the application of your equipment, we can recommend which rollers to use. We consider factors such as product size and weight, and operating conditions.

Extensive product range

There are roller options in stainless steel, zinc-plated mild steel and PVC, with tube diameters ranging from 20mm to 102mm. Whether you are handling small boxes or heavy pallets, conveying wet or dry items, building gravity conveyors or chain driven systems.

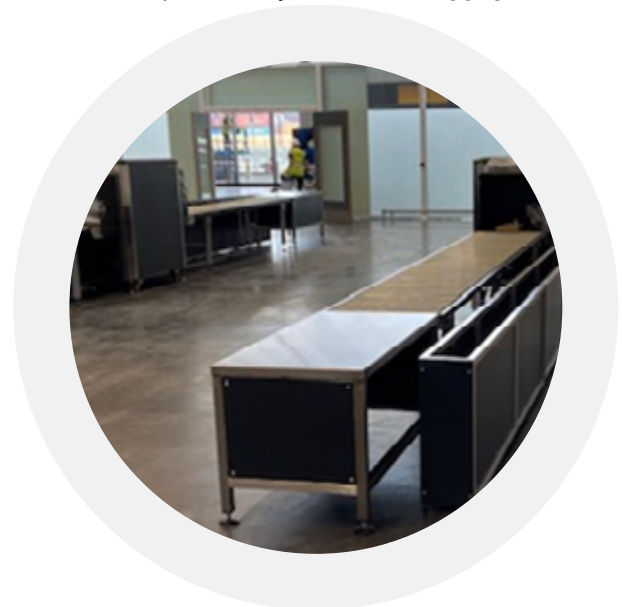

Customer service

Every customer is important to us from the very first time you call and for each interaction we have with you throughout our partnership. We pride ourselves in our reliability and commitment to excellence.

Specification:

- Length 7000mm – Height of tracks adjustable
- Conveyor roller type T200 – Tube diameter 50mm
- Tube material – Mild steel, zinc plated.
- Side panel – Mild steel, powder coated finish RAL 7016 Anthracite Grey
- Bearing specification – Semi precious, steel swaged
- Example Installation below:
- Association of British Ports – New Horizon Terminal Southampton
- Works completed July 2021 - 10 Baggage lanes

CELLSENSE PLUS

The Cellsense portable security pole is an entirely passive unit that is the most effective mobile phone detector currently on the market, capable of detecting mobile phones which are switched off or broken down in to smaller parts.

The Cellsense pole detected small mobile phones that had been digested so there is no health and safety concerns when scanning overtly or covertly, the Cellsense has no effect on pacemakers and is harmless to pregnant women.

The Cellsense Pole is ferromagnetic detection system so it will not false alarm on silver coins or other non ferrous metallic objects.

Its unique design means that it can be deployed very quickly as a freestanding portable unit or as a wall mounted unit, with its rechargeable internal battery packs the Cellsense Pole does not need to be plugged into power sockets (battery life of upto 16 hours on one charge)

Its compact size means one man portability saves on operational costs through minimising staff for operations and deployment and in tests it has a detection rate of 100% on 52 random knives supplied by the Uk Police force.

Main features include:

- Simple controls and adjustable volume control
- Pole weighs approx 9kg, base weighs approx 9kg, pole height 1.9m
- Full body effective head to toe detection
- 16 hour battery life, 3 hours charging time.
- Robust aluminium construction

CELLSENSE ULTRA

Cellsense Ultra is designed for precision, flexibility, and operator simplicity. Ultra is powered by Xact ID, a software-based technology platform that combines state-of-the-art sensor technology, proprietary algorithms, and machine learning to further enhance screening effectiveness, efficiency, and actionable intelligence.

Cellsense Ultra is upgradeable, to add new features and functionalities as the need for detecting threat items changes.

Cellsense Ultra is the most advanced detection system available, designed to grow its capabilities over time. Cellsense Ultra is revolutionising safety and security screening by protecting people, property, and sensitive information in every environment, from prisons, custody suites, and hospitals to corporate, loss prevention and government campuses.

HIRE OPTIONS

These items are available for both long and short term hire!

LINEV GROUP (UK)

LINEV Group (UK) is an innovation ecosystem comprising international interacting companies with different business expertise.

LINEV DTP200LV

The DTP 200LV, a Drive Through Portal Vehicle and Van X-ray Security Inspection System was specially developed for the detection of different dangerous and forbidden objects hidden inside passenger vehicles.

Due to its high-throughput screening gateway the DTP system can scan up to 50 vehicles per hour, so it seems to be really effective x-ray inspection system for the high-traffic areas.

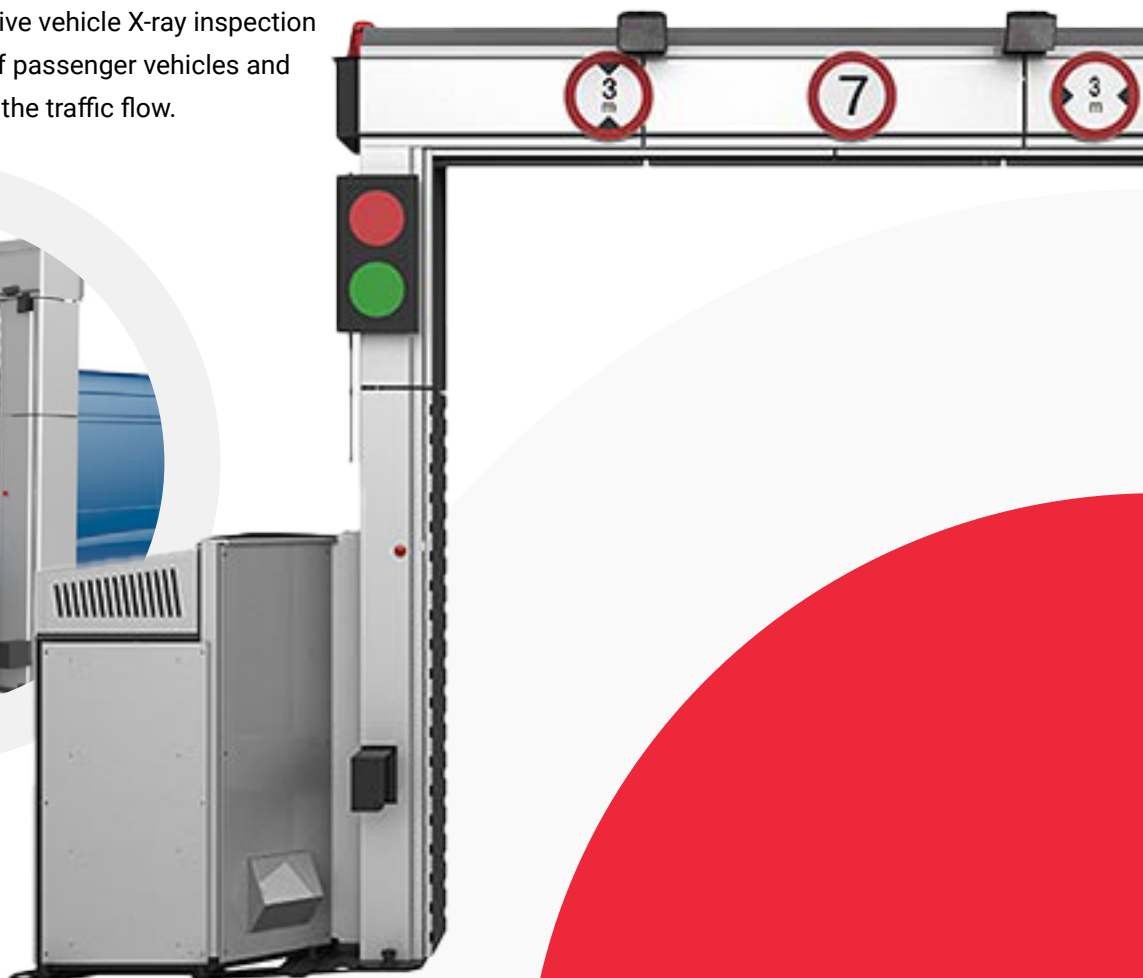

The most flexible and effective vehicle X-ray inspection system for safe screening of passenger vehicles and vans with minimal effect on the traffic flow.

This X-ray security vehicle scanning system uses such a low radiation dose that it allows passengers to remain in their vehicles during the inspection process, that makes the DTP 200LV system convenient and safe for passengers.

The DTP 200LV scanner is an extremely flexible solution which can be customized to meet the specific operational requirements and customers' needs. The DTP 200LV is the best solution for security managers, because it provides high level of security and control at reasonable price and without the necessity of construction of any special infrastructure.

Key features include:

- Drive-thru technology allowing for fast inspection
- Meets ANSI 43.17.2009 General Use standard
- Hardware flexibility allows the system to be used as a covert solution
- Software integration capability
- Multi screen and remote viewing compatible.

LINEV DTP750LVR

DTP 7500LVR is a combination of cost effective DTP 7500LV solution and unique hydraulic relocation set. This combination makes it possible to deploy high-throughput cargo and vehicle screening checkpoint within just one hour.

The DTP 7500LV X-ray security screening system is the best suitable solution for the inspection of large vehicles, cargo containers, tankers and loaded trucks.

This X-ray security system has a small footprint, low staffing requirements and no need for special security infrastructure.

The X-ray security system COMPASS DTP 7500LV can easily detect narcotics, explosives, weapons, as well as any other contraband items hidden inside occupied vehicles and containers. The system can even be adapted to allow discreet screening of vehicles at various types of different locations.

Key features include:

- Fully integrated ANPR system
- Fully integrated driver identification camera
- Remote operation
- Operator cabin
- LED traffic lights
- Speed sensor
- Infrared access limiting barriers
- UPS for scanning system

MOTOROLA

Motorola Solutions manufactures two-way radios and public safety radio systems for first-responders and law enforcement. It also provides software packages for command centers, mapping and drone surveillance.

MOTOROLA R2

After many years of being the leading manufacturer of two way radios, Motorola continue to redesign and produce new models for a new age, The R2 is the most cost effective of all the latest models, robust and durable, IP55 rated and meeting MIL-STD-810 standards this slim and light weight model produces a simplified experience with the user in mind, easy to program and easy to use and comes with a QR code on the main label which when scanned produces a Get started page to help with any minor issues in the field.

Key features include:

- 64 Channel capacity
- Sync noise cancellation
- Slim and lightweight
- Superior transmit range
- Low distortion

HYTERA

Hytera is renowned for its rapid pace of research & development with the objective of simplifying and improving communications across the world. Their digital two-way radios (using DMR technology) are feature rich and used worldwide.

HYTERA HP605

The Hytera HP605 radio is part of the next generation of digital radios, small and light in style, clear audio and extended coverage with a powerful battery, The HP6 series uses cutting edge AI based noise cancellation technology to reduce the back ground noise and howling.

The HP6 series radio is also manufactured to MIL-STD-810G standards which makes it IP67 rated and resilient to a 2 metre drop to stand up to a tough environment of wear and tear and daily use, a digital front screen notifies the user of channel settings and volume levels

Key features include:

- Digital and analogue modes
- Private call / Group call
- Priority interrupt
- Man down safety
- Lone Worker safety
- Text message

1826 BODYCAM

The 1826 body worn camera is a cost effective body worn camera solution for all industries that require robust, easy to use surveillance equipment.

With an impressive high resolution 2304x1296 recordings and can take 8 meg still photos at the click of a button. The software is encased in the coded usb lead so no need to purchase licensed software as this unit will play back through most media software downloaded free of charge from the internet, the 1826 bodycam is a compact, light weight, rugged bodycam which is manufactured to be weatherproof and shock proof, with the Pre - record and post record feature it also has manual and automatic infrared LED's option when working in low light situations.

Key features include:

- Automatic and manual Infrared camera (nightvision) upto 10 metres
- 2" TFT LCD playback screen
- Built in rechargeable battery (12 hours continuous record)
- Time, date and GPS data stamped recordings
- Password protect option
- Flash Light
- IP67 protection against water and dust
- Drop damaged tested upto 2 metres

A502 BODYCAM
